DETAILED ACTION**Reason for allowance**

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-22, 27, and 39, the prior arts fail to teach or fairly suggest a method for policing one or more flows of a data stream of packets associated with different transmission protocols, the method comprises the steps of converting the packet parameter to a predetermined format if the packet is not associated with a predetermined packet protocol, and performing a common bandwidth capacity test as a function of packet parameter and the current bandwidth capacity level to determine whether the packet is conforming, in combination with other limitations, as specified in the independent claims 1, 27, and 39.

Regarding claims 23-26, the prior arts fail to teach or fairly suggest a packet policing system for providing multi-protocol policing of packets of a data stream, the system comprises a policing processor configured to convert each of the packets into a predetermined format, wherein the policing processor is further configured to perform a shared bandwidth capacity test to determined packet conformance for each of the packets, regardless with their original protocol affiliation, in combination with other limitations, as specified in the independent claim 23.

Regarding claims 28-38, the prior arts fail to teach or fairly suggest a method for policing one or more flows of a data stream including packets associated with different transmission protocols, the method comprises the steps of converting the packet parameter to a predetermined format for the packet that do not originally correspond to a predetermined packet protocol, and subjecting the packets of each packet protocol to a single bandwidth capacity test, wherein the capacity test determines whether the packet is conforming as a function of the packet parameter and the current bandwidth capacity level, regardless the packet's original protocol association, in combination with other limitations, as specified in the independent claim 28.
